*Class IIB Narcotics Prison Purwokerto is a government agency under the auspices of the Department of Law and Human Rights which has the main task of fostering convicts who have been sentenced in cases of narcotics or other drugs. The flow of visiting services such as registration and safekeeping of goods. At Class IIB Narcotics Prison, Purwokerto, the registration service is still done manually. Based on these problems, we created a visiting service application based on a mobile app. Later this application aims to provide information to the registration party for those who want to visit. The process of working on the system starts from designing a system design that must pay attention to the User Interface and User Experience so that it is attractive according to user comfort and provides a real picture of the visiting service information system. The design of this application is in the form of a ui/ux design which makes it easier for developers to implement a visit service system with better data coverage and access rights than before.*
