

### **ABSTRACT**

*Marketplace is a place or platform that provides facilities to connect sellers and buyers to transact goods or services. While the NFT marketplace is a platform or place Tersedia for creators or owners as sellers and users as buyers in which creators create works in the form of NFTs and then sell them, and consumers buy them through cryptocurrency wallet transactions. The platform is only supported by a blockchain system which is a supporting system for digital assets or tokens. the purpose of developing metanesia nft is to facilitate integration with the metanesia platform as a metaverse platform which requires digital assets in the form of nft. With the metanesia nft user platform, metaverse metanesia users can make it easier for users to search, transact, integrate and use nft digital assets. In building the metanesia nft platform, a software development method was used using the Scrum method with an agile mindset approach, this aims to make it easier for product managers to conduct iterative interviews with stakeholders.*
