

## ***ABSTRACT***

*Cash book is a book that records all receipts and payments. Beginning balances, receipts, disbursements and cash balances at the end of a certain period are all recorded in the general cash book. If only manual recording is done, the filing system and materials that cannot be used will be stored in the archives. Technology makes data management systems computerized so that data can be managed quickly and accurately. In managing the budget there are still many agencies that use conventional systems. With this website, it is expected that users can report every day and can make report records automatically through the online system so that they can be accessed anywhere and anytime. In this practical work report, the process that the website designer went through in developing an online cash register website called Kasqta.com is explained, starting from activities, flowchat, and web designers.*
