One element of capital in a community, agency, or company is cash. Cash is a form of capital that can affect the operations of a community, agency or company. In cash management, the thing that needs to be considered is the recording process. The process of recording cash must be done as well and as detailed as possible. Given that cash is a volatile asset, cash requires management and supervision. Cash management has a central position and plays a role in maintaining operational flows. One of the information systems that can be made to overcome this is to create a web-based cash management system called “KasQta” which is expected to be used through various devices such as smartphones, laptops and PCs. With the Kasqta website, it is hoped that it will facilitate management in managing cash in a community, organization, or company.
