

ABSTRACT

The learning process for practice-oriented courses is one of the activities that aims to increase students' knowledge and skills in applying theory and practice. Several courses are attempted to be integrated with practicum in the laboratory. Telecommunications Engineering Study Program at the Faculty of Telecommunications and Electrical Engineering, Telkom Purwokerto Institute of Technology has several laboratories that are used for practicum. This is really needed in the process, including the practicum module as a learning medium and as a tool to help students understand the material that will be provided by the supporting lecturer. Therefore, we need a module that increases interest in learning so that it is more easily understood by practitioners.

Keywords: *practicum, module, course, laboratory*
