
ABSTRACT***Web-Based Company Profile Information System Design at
MAPALA UNISI***

Author:

Beny Alphon Tondang

Today's fast-paced and lightweight information age demands a quick search for information discovery. The Internet is a tool that helps people find and obtain information quickly, and the Internet makes every activity easier, such as public services. Website is a portal that can be accessed anytime and anywhere via the internet. Almost every organization or institution in the world has a website that acts as a medium of communication between the company and its clients. This needs to be done by the agency in order to socialize the profile of the agency to parties inside and outside the agency in need. One way to provide information is to create a profile or so-called company profile. MAPALA UNISI is one of the special institutions among the student families of the Islamic University of Indonesia and the only MAPALA Islamic University of Indonesia. Until now MAPALA UNISI does not have a media to present the Company Profile. Starting from these problems, the author built a company profile website based on Laravel framework as a solution. MAPALA UNISI Company Profile Website provides features such as news portal, activity gallery, location information, and so forth, which will make it easier for MAPALA UNISI to disseminate information about activities carried out by MAPALA UNISI.

Keywords: *Company Profile, Information System, MAPALA, Website*
