

ABSTRACT

Technological developments are increasingly advancing in our lives. With technology that makes it easier for us, many companies have been trained to develop IT features that can help and make it easier for their employees. One feature that really helps is the Telegram Bot. Telegram bot is a bot or robot that is programmed with various commands to carry out a series of instructions given by the user. This bot is just a Telegram account operated by software that has AI features. The Telegram bot can do anything on command (which is already available). In this project, bots are created with the aim of calling data from what is input by the user via a chat. This bot called Pecmen Bot is run using the Python language and uses the Pythonanywhere online server so that the Bot can run online

Keywords: *Telegram Bot, Python, Pythonanywhere*
