Technological developments are currently growing rapidly from year to year, with the existence of an online news portal website information can be constructed or formed by journalists so that it is feasible to be able to easily provide existing information. By going through the website the information that has been in can be the right information. , because various agencies use the website to provide useful information for the people of Banyumas. The target of this problem is that the User Interface (UI) needs something to redesign the Banyumas TV website, which of course will be more attractive. The purpose of doing Redesign is to make the website look beautiful by doing this to increase the satisfaction of people who use it and of course it will be easy to use to make users more comfortable using the website and improve the quality of the form and visuals. Process redesign using a Figma tool. Figma is a cloud-based design tool with the concept of sketch functionality but it's better to collaborate with other designers. The results of the redesign will make the website look more modern.
